

Rife's Frequency Generator: An Electromagnetic Antibiotic?

by Dr. Charles McWilliams

Over the years, I've heard many reports of "the world's most powerful microscope" invented in late 1920's by Raymond Royal Rife. Surrounding this mystery microscope was an apparent coverup of its discovery which has now been disclosed in the book *The Cancer Cure That Worked, Fifty Years of Suppression*, by Barry Lynes and John Crane. Had it not been for the fact that I know a retired physician who personally met Rife, saw the microscope, and shortly thereafter had an attempt made on his life, such stories could be dismissed. But this line of research needs to be pursued.

Royal Rife apparently learned scientific methods with the U.S. Navy during World War I. After the war, he collected instruments and materials and built a microscope, thanks to the monetary contributions of two San Diego industrialists. Rife believed that the minuteness of viruses made it impossible to stain them with dyes the same as bacteria. He conceived of the idea of irradiating them with polarized light and finding their color frequency. This method did not kill the organism in the process. A report appeared in the *Los Angeles Times* on November 22, 1931 stating the following: "Scientific discoveries of the greatest magnitude, including a discussion of the world's most powerful microscope recently perfected after 14 years of effort by Dr. Royal Raymond Rife of San Diego, were described Friday evening to members of the medical profession, bacteriologists and pathologists, at a dinner given by Dr. Milbank Johnson in honor of Dr. Rife and Dr. A.I. Kendall."

"Before the gathering of distinguished men, Dr. Kendall told of his researches in cultivating the typhoid bacillus on his new 'K' medium. The typhoid bacillus is nonfilterable and is large enough to be seen easily with microscopes in general use. Through the use of medium K, Dr. Kendall said the organism is so altered that it cannot be seen with ordinary microscopes and it becomes small enough to be ultramicroscopic or filterable. It can then be changed back to the microscopic or filterable form."

"Through the use of Dr. Rife's powerful microscope, said to have a visual power of magnification to 17,000 times, compared

with 2,000 times which the ordinary microscope is capable, Dr. Kendall said he could see the typhoid bacilli in the filterable or formerly invisible stage. It is probably the first time the minute filterable virus organisms have ever been seen."

"The strongest microscope now in use can magnify between 2,000 and 2,500 times. Dr. Rife, by an ingenious arrangement of lenses applying an entirely new optical principle and by introducing double quartz prisms and powerful illuminating lights, had devised a microscope with a lowest magnification of 5,000 times and a maximum working magnification of 17,000 times...."

Five days later in the *Los Angeles Times* a photo of Rife and Kendall appeared with

*He had shown the
cancer virus changes
form, depending upon
its environment.*

the microscope; the headline read "The World's Most Powerful Microscope." *Science News* carried an article on December 11, 1931 and stated the following:

"The light used with Dr. Rife's microscope is polarized, that is, it is passing through crystals that stop all rays except those vibrating in one particular plane. By means of a double reflecting prism built into the instrument, it is possible to turn this plane of vibration in any described direction, controlling the illumination of the minute objects in their field exactly."

The story that follows leads to a very displeasing battle between Rife, the medical establishment, jealous researchers, and the pharmaceutical houses. Dr. Royal Lee of the Lee Foundation for Nutritional Research in Milwaukee spent many weekends with Rife. He later published a small report on Dr. Fishbein, then acting president of the AMA, and the battle that ensued. Lee stated "No medical journal was ever permitted to report on Rife's work. This one by the Franklin Institute slipped by the censors, since this

organization is not medical but supports general scientific activities. But that mistake was soon rectified, it appears, as there is still no general knowledge of Rife's epoch-making discoveries. Again, the iron curtain of Fishbein is effective.... We can give a list of various subjects on which this censorship is rigorously applied. Only the treatment of disease with synthetic drugs is carefully reported. Botanicals are played down, foods as remedies are almost as taboo as Rife's work.... The official definition of a medical remedy for disease excludes automatically any vitamin, nutritional mineral or enzyme...."

In the years that followed, Rife would improve and perfect his earlier models, identify and classify disease-causing organisms in a totally unique way. He was looking for their "Mortally Oscillatory Rate" - the precise electromagnetic frequency which "blew them up." He would literally look at the live organism through his microscope, irradiate them with radio frequencies until he found the rate that made them explode, in the same manner sound can shatter glass.

Rife's Frequency Generator was described on May 6, 1928 in the *Evening Tribune* of San Diego as follows:

"Just what this Ray does to organisms to devitalize them is not yet known. Because each organism requires a different wavelength, it may be that whatever befalls these tiny slayers of man is something similar to the phenomenon occurring when the musical tuning fork is set in vibration by sound waves emanating from another fork struck nearby...."

"Rife thinks the lethal frequencies for various organisms are, as in sound waves, coordinates of frequencies existing in the organism themselves. If this is the explanation, it means that the Rife Ray probably causes the disease organisms to disintegrate or partially disintegrate, just as the vase and the glass. Several bits of evidence indicate that this is exactly what happens...."

"When the ray is directed upon them, they are seen to behave very curiously; some kinds literally disintegrate, and others writhe as if in agony and finally gather in deathly unmoving clusters."

"Brief exposure to tuned frequencies, Rife commented, brings fatal reactions. In

some organisms, it happens in seconds."

After the organisms have been bombarded, the laboratory reports show, they are dead. They have become devitalized - no longer exhibit life, do not propagate their kind and produce no disease when introduced into the bodies of experimental animals."

Now, he reported, "the mortal oscillatory rates for many, many organisms have been found and recorded and the ray can be tuned to the germ's recorded frequency and turned upon that organism with the assurance that the organism will be killed."

It appears that Rife's real impetus was to identify the viral cause of cancer. Rife began using Kendall's K medium in 1931. On May 11, 1938, the *Evening Tribune* of San Diego reported the following:

"...He happened to test a tube of cancer culture within a circle of tubular ring filled with argon gas activated by an electrical current...he noticed under the microscope that its appearance seemed to have changed. He studied and tested this phenomenon repeatedly, and thus discovered cancer virus filter passing, red-purple granules in the cultures."

Rife's laboratory notes for 1932 contain the written description of the cancer virus characteristics. Rife and his assistant confirmed the discovery 104 consecutive times. Rife was able to demonstrate that the cancer microorganism had 4 forms:

1. BX carcinoma
2. BY sarcoma
3. Monococoid form in the monocytes of blood of over 90% of cancer patients. When properly stained, this form can be readily seen with a standard microscope.
4. Cryptomyces pleomorphia fungi- identical morphology to that of the orchid and the mushroom.

Rife wrote in his 1953 book: "Any of these forms can be changed back to BX within a period of 36 hours and will produce in the experimental animal a typical tumor with all the pathology of true neoplastic tissue, from which we can again recover BX micro-organism. This complete process has been duplicated over 300 times with identical and positive results."

Rife continued: "After one year, we take this same stock culture of dormant cryptomyces pleomorphia fungi and plant it back on its own asparagus base media; there is no longer a cryptomyces pleomorphia, no longer a monococoid organism such as found in the monocytes of blood, there is no longer BX or BY form, but there is, from the initial virus isolated directly from an ulcerated human breast mass, a bacillus coli, that will pass any

known laboratory methods of analysis."

Rife had proven pleomorphism. He had shown the cancer virus changes form, depending upon its environment. He had confirmed the work of Bechamp, Kendall, Rosenow, Welch, and other pleomorphist bacteriologists. Rife stated, "In reality, it is not the bacteria themselves that produce the disease, but the chemical constituents of the micro-organisms enacting upon the unbalanced cell metabolism of the human body that in actuality produce the disease. We also believe that if the metabolism of the human body is perfectly balanced or poised it is susceptible to no disease."

By 1934, Rife was ready to use his frequency instrument on human cancer. The records show that a cancer clinic was conducted at the University of Southern California under the head of Milbank Johnson. After his death in 1944, all records "mysteriously disappeared." But Rife, in his 1953 book disclosed what occurred:

"With the frequency instrument treatment, no tissue is destroyed, no pain is felt, no noise is audible, and no sensation is noticed. A tube lights up and 3 minutes later the treatment is completed. The virus or bacteria is destroyed and the body then recovers itself naturally from the toxic effect of the virus or bacteria. Several

Electromagnetic Antibiotic?

diseases may be treated simultaneously."

"The first clinical work on cancer was completed under the supervision of Milbank Johnson, M.D. which was set up under a Special Research Committee of the University of Southern California. Sixteen cases were treated at the clinic for many types of malignancy. After 3 months, 14 of these so-called hopeless cases were signed off as clinically cured by the staff of 5 medical doctors and Dr. Alvin G. Foord, M.D. pathologist for the group. The treatments consisted of 3 minutes' duration using the frequency instrument which was set on the mortal oscillatory rate for BX cancer (at 3-day intervals). It was found that the elapsed time between treatments attains better results than the cases treated daily. No rise of body temperature was perceptible in any of these cases above normal, during or after the frequency instrument treatment. No special diets were used in any of this clinical work, but we sincerely believe that a proper diet compiled for the individual would be of benefit."

Electromagnetic Antibiotic?

conductor device that is a duplicate of the original and final model of Rife. It is a sweep generator in the radio frequency range. We have been treating 2 AIDS victims over the last 60 days with remarkable success. The patients have shown weight gain, reduction of symptoms, and improved mental spirit. These are most positive signs and are more dynamic than other forms of chemical treatment, including AZT, extracts of Aloe vera, and emetine. Several cases have been treated of early influenza and have shown an immediate halt of the infection with symptoms disappearing in 24 hours.

The author has also talked to physicians using the device in the Tijuana cancer clinics. It is used as a powerful adjunct and raises the patient's energy level to help combat the illness. Scores of arthritis patients have been treated. Symptoms improve immediately and in many cases, with continued treatment, the pain disappears entirely.

It is this author's contention that this mode of treatment needs serious investigation. The fact that micro-organisms can be combatted with apparently harmless radio frequency is a milestone of science, not to mention a humanitarian obligation. Those who are interested can contact the author for further details and information.

Wait a minute here. - Did I miss? .

The Rife Machine

The device produces a curious blend of harmonics, some of which we cannot pinpoint on the oscilloscope. It creates resonance patterns to sympathetically oscillate a microorganism until it is devitalized. The device produces pulsed acoustical type signals, giving quarter wave resonance patterns required for viruses. Today's square wave type TENS devices do not generate these odd-harmonics but only electrical impulses that do not vibrate viral cells.

The original Rife machine was a venier dialed instrument with a frequency counter. Royal Rife discovered set lethal frequencies for reportedly a number of different micro-organisms. The author has obtained from one researcher a partial list from Rife's personal notes: Staphylococcus 725-730 Hz., Streptococcus 875-885 Hz., Pneumonia 770-780 Hz., Typhoid 1.5-1.6 KHz., E. coli 799-804 Hz., TB 1.5-1.6 KHz., Syphilis and Gonorrhea 600-700 Hz., Epstein-Barr virus 660-727-787 Hz., Carcinoma virus 2120-2130 Hz., Sarcoma virus 2000-2100 Hz.

We have here more than the seeds of a growing revolution in electro-medicine. Research should immediately begin and pursue Rife's work. Not only on an academic and laboratory front but also work to immediately abate the pain and suffering which this instrument has proven to do.

Experiences with Rife Machine

(1954)

It is with difficulty that I attempt to respond to your request for data on the Frequency Instrument treatments since I am moving and am very busy.

My knowledge of the Frequency Instrument treatment extends over a number of years, although my personal use of the Frequency Instrument has been in the last few years. My first definite investigation was in that of my own case of prostatitis, I tried medicines. A qualified urologist gave me gantrisin, penicillin, aureomycin, chloromycitin terramycin, with various results but the drugs did not do the job. The Frequency Instrument cured my case quickly. I then used the Frequency Instrument on a friend of mine who was being rushed to the hospital for a prostate operation. He is perfectly well today without any operation or further medical aid.

I had a case of butterfly lupus sent to me by a doctor friend, and though it had been treated extensively and by specialists, the condition was large and in progression. After three months treatment with the Frequency Instrument, the butterfly lupus disappeared. Another cancer (carcinoma) case was submitted to me for treatment with the Frequency Instrument by an M.D. friend of mine. He had an impossible condition but the Frequency Instrument dried it up in six weeks.

I have found the Frequency Instrument very effective after surgery. I use it alone instead of antibiotics and have not had a case of infection. I have cured extremely bad cases of trench mouth and pyorrea in a few treatments with the Frequency Instrument.

In conclusion I must state that I feel that the Frequency Instrument is worthy of further research and that subsequent investigation and use will be of great benefit to all humanity.

Charles F. Tully
